                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to specific fungi or bacteria detected and CC quantified in a sample by extracting and recovering DNA from the organism CC in the sample and hybridising and amplifying the DNA sequence using CC sequences unique to the species/group of species but common to all CC isolates of the species/group of species. The method especially employs Sequences (ABN99429-ABN99653) for detection of specified fungi/fungal CC groups or specified bacteria. The method enables detection and CC quantification of specific fungi or bacterial primer and treatment of CC fungal/bacterial species, useful medically for disgnosis and treatment of CC fungi or bacteria associated with health problems such as infections, CC gastroenteritis, ulcers, asthma, allergies and sinusitis. It is also CC useful to detect and/or quantify microorganisms in the environment e.g. CC to establish the risk of adverse health effects (e.g. pulmonary CC haemorrhage from levels of Stachybotrys chartarum in air samples in
                                                                      Detecting and quantifying fungi and bacteria, involves obtaining a sequence of the fungus, extracting the DNA from the sample, and subjecting the DNA to polymerase chain reaction and fluorescent probe
                                                       analysis
